Source: look the system in [BETA SERVER](#)

Linked: [INNTECNET](#)

---

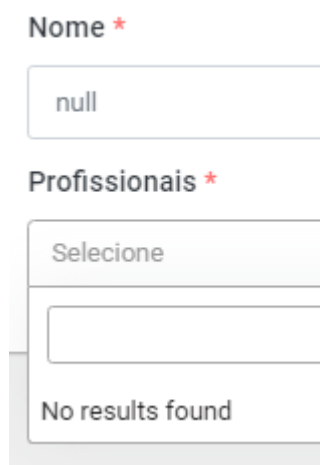

## admin system

Left navbar:

- the top button is similar to back page, but hide the navbar - bad UX
- professional and credential section has only a one link - transform into a link directly

In page of [professional](#) in the list table, show **pages button** only if *professionals > 10*

In credentials if I pass an random user, he search then and show the following list:

Nome \*

null

Profissionais \*

Selecione

No results found

If search a [jo](#) show only one user (Maria Joana) but has other user with Jo, Joao

- ☐ Made a validation, if user not exists show a warning message to user

The next button when select the professional need show in bottom of form, not in to of page - bad UX

### Credential page:

Because the first row of the list is marked?
